

PT-15 - PT SERIES POLE TRAILER

The PT - Series pole trailers from Schutt Industries provides your company with a cost-effective and road compliant trailer designed with efficiency and safety in mind. The electric brakes with emergency breakaway system activates should the trailer disengage in transport, thereby preventing a more serious outcome.

Exposed wiring at the mercy of the elements is a thing of the past with the standard cat-track wiring. These features combined with LED lighting, light bar and mud flaps ensure a safe, uneventful transport of your poles to the jobsite. With several trailer lengths and payload capacities available, Schutt is sure to have what you want.

The bottom line is the Schutt PT Series trailers increase productivity while keeping expense at a minimum both now and throughout the life of the trailer.

Schutt Industry brand trailers perform better and last longer with fewer service issues than any other product of their type on the market today. Now that's value!
