## HL - Series Cable Reel Trailers

The HL - Series cable reel trailers from Schutt Industries are designed to increase your company's productivity while at the same time reducing expenses and maximizing safety. For example, the hydraulic lift rack allows one person to load cable reels safely and efficiently, saving your company added expense while better utilizing manpower elsewhere. The trailer is built on an 8000 lb torflex axle to ensure a smooth ride regardless of the terrain, making it safe for the driver and easy on the cargo. Depending upon your cable needs, a gas powered hydraulics for reel take up and auxiliary tool circuit is available.

But the bottom line is, will the Schutt HL Series increase productivity while keeping expense at a minimum both now and throughout the life of the trailer? The answer is a resounding yes!

## About Schutt Industries

Schutt Industries, a \$100 million company, is the leading manufacturer of trailering systems for the United States military. The company's experience in providing durable trailers that withstand the rigors of the battlefield is now available for commercial use.
